Professional Summary

Computer Science undergraduate with strong foundations in Java, Python, Data Structures and backend development. Experienced in building full-stack web applications using Django, MySQL, REST APIs and deploying projects on Vercel. Passionate about solving real-world problems through scalable software solutions.

Education

B.Tech – Computer Science Engineering	2023 – Present
Vasireddy Venkatadri Institute of Technology	CGPA: 7.27 / 10
Diploma – SBTET	2020 – 2023
Government Polytechnic, Vempalli	Percentage: 81.91%

Technical Skills

Programming: Java (Core, JDBC), Python, C++
Backend Development: Django (Beginner), REST APIs, MVC Architecture
Database: MySQL, SQL (Joins, Subqueries, CRUD), Database Design, Normalization
Web Technologies: HTML, CSS, JavaScript, React.js
Machine Learning: Regression, Classification, CNN (TensorFlow, Keras)
Tools: Git, GitHub, VS Code, Google Colab, Vercel
Core CS: Data Structures and Algorithms, OOP Concepts

Projects

Cat vs Dog Image Classification Built a CNN-based deep learning model using TensorFlow and Keras. Converted the model into a web-based application and deployed it on Vercel.

Medical Cost Prediction Developed a regression model using Scikit-Learn with feature engineering and data preprocessing techniques. Deployed the application for public access.

Full-Stack Web Applications (Django + Frontend Projects) Built and deployed full-stack web applications using Django and MySQL. Implemented user authentication, database models, REST APIs, and CRUD operations. Developed responsive frontend interfaces using HTML, CSS, and JavaScript, and deployed applications on Vercel.

Certifications

- NPTEL Certifications – Programming in Java and Deep Learning
- Applied AI – Deep Learning Program (WorldQuant University)

Interests

Problem solving, backend system design, exploring AI applications, listening to music, and watching movies.
